Excerpt: . . . race, Hispanic origin, education, and marital status to the distribution from the SIPP. Using the SIPP as the benchmark allows us to compare a larger set of covariates. In this way we can check whether the two key steps in the construction of the data set (matching the SIPP pooled panel to SSA records and filling missing years) made the cross-sectional patterns of the sample diverge compared with those from a national representative sample. Table 2 presents this comparison for selected years 1984 and 1996 (for other years, the same patterns emerge). The table shows that the sample replicates quite closely statistics from the SIPP in a particular point in time and also the changes in these distributions across time. Another important aspect in determining the reliability of the results from this study regards the quality of the mortality data. To gauge its quality, I compare sample death rates by age and sex to those computed using...
